

Beautiful smile, *naturally!*

The condition of our teeth can affect our physical, mental and social health. Teeth play a key role in the digestive system, but their social and aesthetic function is as much important.

Pearly white healthy teeth and perfect smile - this is what you can see on television, in various commercials and the movies of Hollywood day by day. Hence, it is not surprising that a beautiful smile is becoming an increasingly important part of our life.

Beautiful, healthy teeth and eyes are the most prominent parts of the face. Sparkling white teeth provide a young and neat appearance, making the face even more beautiful. Having white teeth can have an incredible effect on one's self-esteem. It is easier to be confident when you know you look good and feel good about yourself.

Perfect white teeth make a person appear not just more aesthetically attractive, but also more happy and friendly, while having poor teeth may have a detrimental effect on a person's personal and social life and even their career prospects.

To maintain good oral health, keep a healthy diet - eliminate foods containing added sugars and starch - master the appropriate brushing technique and have regular visits at the dentist's office.

Most of the people have white teeth when they are young. Stained teeth can occur as we age, but some common food, drinks, and tobacco can stain teeth. The abrasion and polishing methods dentists use can remove many teeth stains. Due to the modern tooth whitening techniques, further discoloration can be prevented. However, beware of unknown or uncontrolled bleaching methods.

Not very long ago a young gentleman visited our clinic with dental problems. As he was longing for whiter teeth and wanted to improve his look, he had bought a tooth whitening home appliance abroad. He tried to do follow the instructions, but

unfortunately his teeth heavily damaged from acid erosion. As his condition worsened, his teeth became decayed and sensitive.

As his upper front teeth were protruding slightly with an anterior open bite, he did not only want a beautiful Hollywood smile but also a correct bite. Our team of experts made his dreams come true within two weeks.

In a day his upper teeth were restored, brightened up and evened out with porcelain bonded crowns and root canal treatment. He wore temporary crowns for a couple of days while the dental laboratory made the permanent ones from metal-free zirconium.

Check the Before and After pictures and see the difference achieved as a result of the professional dental treatment, within two weeks' time.

ARE YOU DISSATISFIED WITH YOUR SMILE? DO YOU FEEL PAIN AND INCONVENIENCE?
